USR
Generator

PERFECT PURE SINE WAVE OUTPUT

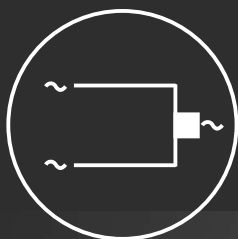

It can perfectly output a sine wave similar to city electrical power, and the distortion rate is effectively controlled under 25%.

The most suitable auxiliary power supply for computers and various precision electronic instruments.

PRODUCT PERFORMANCE
Good quality and impeccable

USR
Generator

UNIQUE PARALLEL OPERATION

Double output, more powerful. By connecting two EV variable frequency generators of the same type in parallel.

By accumulating the power of the two generators, a high power output will be obtained.

PARALLEL Output

2 pcs 1kW Generator Total 2kW power output

USR
Generator

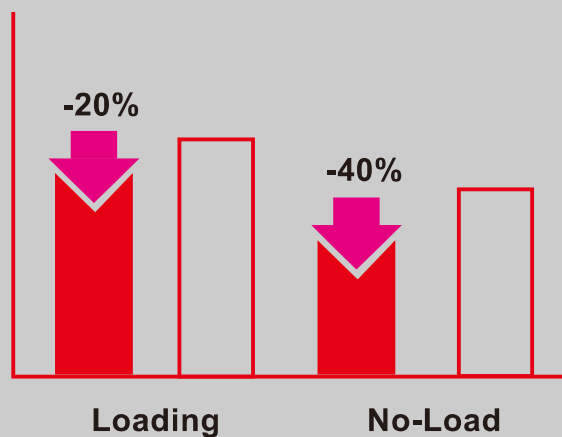

EXCELLENT FUEL ECONOMY LONG-LASTING ENERGY SAVING

One fuel, twice the output, and advanced energy-saving technology that automatically adjusts the speed with the load.

Automatic control of the power speed thus greatly reduces fuel consumption.

LIGHTWEIGHT DESIGN ULTRA-LIGHTWEIGHT AND COMPACT

Using Honda's leading high-speed multi-pole generator and frequency conversion system combined with the power part, in addition to the flywheel, it is ultra-lightweight and miniaturized. Under the same output power conditions (1kW), compared to the normal Generator is 50% lighter and 30% smaller. Some models can be carried with one hand.

Generator

SILENT EXCELLENT EUROPEAN STANDARD

Excellent silence for a quiet atmosphere. The dual silencer construction and automatic speed adjustment make it possible to exceed European strict noise standards and be used in nightingales and streets without affecting the surrounding environment.
